Q1. How many different candy types are in this dataset?

```
nrow(candy)
```

```
[1] 85
```

Q2. How many fruity candy types are in the dataset?

```
sum(candy$fruity)
```

```
[1] 38
```

Q. What are these fruity candy?

We can use the ==

```
rownames(candy[candy$fruity == 1, ])
```

```
[1] "Air Heads"           "Caramel Apple Pops"
[3] "Chewey Lemonhead Fruit Mix" "Chiclets"
[5] "Dots"                "Dum Dums"
[7] "Fruit Chews"         "Fun Dip"
[9] "Gobstopper"          "Haribo Gold Bears"
[11] "Haribo Sour Bears"    "Haribo Twin Snakes"
[13] "Jawbusters"          "Laffy Taffy"
[15] "Lemonhead"           "Lifesavers big ring gummies"

```

How often does my favorite candy win

```
candy["Twix",]$winpercent
```

```
[1] 81.64291
```

Q3. What is your favorite candy in the dataset and what is it's winpercent value?

```
candy["Snickers",]$winpercent
```

```
[1] 76.67378
```

Q4. What is the winpercent value for “Kit Kat”?

```
candy["Kit Kat",]$winpercent
```

```
[1] 76.7686
```

Q5. What is the winpercent value for “Tootsie Roll Snack Bars”?

```
candy["Tootsie Roll Snack Bars",]$winpercent
```

```
[1] 49.6535
```

```
library("skimr")
skimr::skim(candy)
```

Table 1: Data summary

Name	candy
Number of rows	85
Number of columns	12
Column type frequency:	
numeric	12
Group variables	None

Variable type: numeric

skim_variable	n_missing	complete_rate	mean	sd	p0	p25	p50	p75	p100	hist
chocolate	0	1	0.44	0.50	0.00	0.00	0.00	1.00	1.00	
fruity	0	1	0.45	0.50	0.00	0.00	0.00	1.00	1.00	
caramel	0	1	0.16	0.37	0.00	0.00	0.00	0.00	1.00	
peanutyalmondy	0	1	0.16	0.37	0.00	0.00	0.00	0.00	1.00	
nougat	0	1	0.08	0.28	0.00	0.00	0.00	0.00	1.00	
crispedricewafer	0	1	0.08	0.28	0.00	0.00	0.00	0.00	1.00	
hard	0	1	0.18	0.38	0.00	0.00	0.00	0.00	1.00	

skim_variable	n_missing	complete_rate	mean	sd	p0	p25	p50	p75	p100	hist
bar	0	1	0.25	0.43	0.00	0.00	0.00	0.00	1.00	
pluribus	0	1	0.52	0.50	0.00	0.00	1.00	1.00	1.00	
sugarpercent	0	1	0.48	0.28	0.01	0.22	0.47	0.73	0.99	
pricepercent	0	1	0.47	0.29	0.01	0.26	0.47	0.65	0.98	
winpercent	0	1	50.32	14.71	22.45	39.14	47.83	59.86	84.18	

Q6. Is there any variable/column that looks to be on a different scale to the majority of the other columns in the dataset?

Yes, the `winpercent` column is on a 0:100 scale and all others appear to be 0:1 scale.

Q7. What do you think a zero and one represent for the `candy$chocolate` column?

0 means that the candy does not contain chocolate 1 means that the candy does contain chocolate

Q8. Plot a histogram of `winpercent` values

```
library(ggplot2)

ggplot(candy, aes(winpercent)) + geom_histogram(binwidth=10)
```

Q9. Is the distribution of winpercent values symmetrical?

No

Q10. Is the center of the distribution above or below 50%?

Below 50% with a mean:

```
mean(candy$winpercent)
```

```
[1] 50.31676
```

Q11. On average is chocolate candy higher or lower ranked than fruit candy?

To answer this question I will need to “subset” the candy dataset to just chocolate candy and then calculate the mean of these. Then do the same for fruity candy and compare.

avg win% of chocolate candy:

```
#Subset to just chocolate rows
choco <- candy[as.logical(candy$chocolate),]

# Get their winpercent values
choco.win <- choco$winpercent

# Calculate their mean winpercent value
mean(choco.win)
```

```
[1] 60.92153
```

avg win% of fruit candy:

```
fruit <- candy[as.logical(candy$fruity),]

fruit.win <- fruit$winpercent

mean(fruit.win)
```

```
[1] 44.11974
```

On average, chocolate candy is higher ranked than fruit candy.

Q12. Is this difference statistically significant?

```
t.test(choco.win, fruit.win)
```

Welch Two Sample t-test

```
data: choco.win and fruit.win
t = 6.2582, df = 68.882, p-value = 2.871e-08
alternative hypothesis: true difference in means is not equal to 0
95 percent confidence interval:
 11.44563 22.15795
sample estimates:
mean of x mean of y
 60.92153  44.11974
```

Overall Candy Ranking

There is a base R function called `sort()` for sorting vectors of input

```
x <- c(5,2,10)

#sort(x, decreasing = TRUE)
sort(x, decreasing = TRUE)
```

```
[1] 10  5  2
```

The buddy function to `sort()` that is often more useful is called `order()`. It returns the “indices” of the input that would result in it being spread.

```
order(x)
```

```
[1] 2 1 3
```

```
x[order(x)]
```

```
[1]  2  5 10
```

Q13. What are the five least liked candy types in this set?

I can order by `winpercent`

```
ord <- order(candy$winpercent)
candy[ord,]
```

Reese's Peanut Butter cup	0.651	84.18029
Reese's Miniatures	0.279	81.86626
Twix	0.906	81.64291
Kit Kat	0.511	76.76860
Snickers	0.651	76.67378

Q15. Make a first barplot of candy ranking based on winpercent values.

```
ggplot(candy) +
  aes(winpercent, rownames(candy)) +
  geom_col()
```

Q16. This is quite ugly, use the reorder() function to get the bars sorted by winpercent?

```
ggplot(candy) +
  aes(winpercent, reorder(rownames(candy), winpercent)) +
  geom_col()
```

```
my_cols=rep("black", nrow(candy))
my_cols[as.logical(candy$chocolate)] = "chocolate"
my_cols[as.logical(candy$bar)] = "brown"
my_cols[as.logical(candy$fruity)] = "pink"

ggplot(candy) +
  aes(winpercent, reorder(rownames(candy), winpercent)) +
  geom_col(fill=my_cols)
```

Q17. What is the worst ranked chocolate candy?

Sixlets

Q18. What is the best ranked fruity candy?

Starburst

Taking a look at pricepercent

Q19. Which candy type is the highest ranked in terms of winpercent for the least money - i.e. offers the most bang for your buck?

```
my_cols[as.logical(candy$fruity)] = "red"
ggplot(candy, aes(winpercent, pricepercent)) + geom_point(col=my_cols)
```

Add some labels

```
ggplot(candy, aes(winpercent, pricepercent, label=rownames(candy))) + geom_point(col=my_co
```

To deal with overlapping labels I can use the **ggrepel** package

```
library(ggrepel)

ggplot(candy) +
  aes(winpercent, pricepercent, label=rownames(candy)) +
  geom_point(col=my_cols) +
  geom_text_repel(max.overlaps = 10, col=my_cols)
```

Warning: ggrepel: 50 unlabeled data points (too many overlaps). Consider increasing max.overlaps

REESE'S MINIATURES

Q20. What are the top 5 most expensive candy types in the dataset and of these which is the least popular?

```
ord <- order(candy$pricepercent, decreasing = TRUE)
head( candy[ord,c(11,12)], n=5 )
```

	pricepercent	winpercent
Nik L Nip	0.976	22.44534
Nestle Smarties	0.976	37.88719
Ring pop	0.965	35.29076
Hershey's Krackel	0.918	62.28448
Hershey's Milk Chocolate	0.918	56.49050

Exploring the correlation structure

Pearson correlation goes between -1 and +1 with 0 indicating no correlation, and values close to one being very highly correlated.

```
library(corrplot)
```

corrplot 0.92 loaded

```
cij <- cor(candy)
corrplot(cij)
```

Q22. Examining this plot what two variables are anti-correlated (i.e. have minus values)?

Fruity and Chocolate

Bar and Pluribus

Q23. Similarly, what two variables are most positively correlated?

Chocolate and Winpercent

Principal Component Analysis

The base R function for PCA is called `prcomp()` and we can set “scale=TRUE/FALSE”

```
pca <- prcomp(candy, scale = TRUE)
summary(pca)
```

Importance of components:

	PC1	PC2	PC3	PC4	PC5	PC6	PC7
Standard deviation	2.0788	1.1378	1.1092	1.07533	0.9518	0.81923	0.81530
Proportion of Variance	0.3601	0.1079	0.1025	0.09636	0.0755	0.05593	0.05539
Cumulative Proportion	0.3601	0.4680	0.5705	0.66688	0.7424	0.79830	0.85369

	PC8	PC9	PC10	PC11	PC12
Standard deviation	0.74530	0.67824	0.62349	0.43974	0.39760
Proportion of Variance	0.04629	0.03833	0.03239	0.01611	0.01317
Cumulative Proportion	0.89998	0.93832	0.97071	0.98683	1.00000

The main result of PCA - i.e. the new PC plot (projection of candy on our new PC axis) is contained in `pca$x`

```
pc <- as.data.frame(pca$x)

ggplot(pc) +
  aes(PC1, PC2, label = rownames(pc)) +
  geom_point(col=my_cols) +
  geom_text_repel(max.overlaps = 5)
```

Warning: ggrepel: 71 unlabeled data points (too many overlaps). Consider increasing max.overlaps

Q24. What original variables are picked up strongly by PC1 in the positive direction? Do these make sense to you?

```
par(mar=c(8,4,2,2))
barplot(pca$rotation[,1], las=2, ylab="PC1 Contribution")
```

Fruity; Yes
