# Class09

## Jae Kim

## **PDB Statistics**

The PDB is the main database for structural information on biomolecules. Let's see what it contains:

Download a CSV file from the PDB site (accessible from "Analyze" > "PDB Statistics" > "by Experimental Method and Molecular Type". Move this CSV file into your RStudio project and use it to answer the following questions:

```
db <-read.csv("pdbData.csv")</pre>
db
```

	Molecular.Ty	oe X.ray	EM	NMR	Multiple.methods	Neutron	Other
1	Protein (onl	7) 154,766	10,155	12,187	191	72	32
2	Protein/Oligosaccharie	de 9,083	1,802	32	7	1	0
3	Protein/	NA 8,110	3,176	283	6	0	0
4	Nucleic acid (onl	7) 2,664	94	1,450	12	2	1
5	Oth	er 163	9	32	0	0	0
6	Oligosaccharide (onl	7) 11	0	6	1	0	4

> Q1: What percentage of structures in the PDB are solved by X-Ray and Electron Microscopy.

```
xray.total <- gsub(",", "", db$X.ray)</pre>
  sum(as.numeric(xray.total))
[1] 174797
Function:
  total <- function(x) {</pre>
    x <- gsub(",", "", x)
    sum(as.numeric(x))
  total(db$X.ray)
[1] 174797
  total(db$EM)
[1] 15236
  total(db$Total)
[1] 204352
  percentage <- function(y){</pre>
   total(y)/total(db$Total)*100
  percentage(db$X.ray)
[1] 85.53721
  percentage(db$EM)
[1] 7.455763
     Q2: What proportion of structures in the PDB are protein?
```

## [1] 0.87

Q3: Type HIV in the PDB website search box on the home page and determine how many HIV-1 protease structures are in the current PDB?

### **SKIPPED**

Figure 1: HIV-PR structure from MERK with a bound drug

Q4: Water molecules normally have 3 atoms. Why do we see just one atom per water molecule in this structure?

The structure is too low a resulution to see H atoms. You need a sub 1 Angstrom resolution to see Hydrogen.

Q5: There is a critical "conserved" water molecule in the binding site. Can you identify this water molecule? What residue number does this water molecule have

#### **HOH308**

# Working with Structures in R

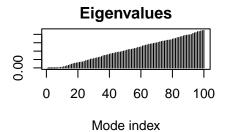

We can use the bio3d package to read and perform bioinformatics calculations on PDB structures.

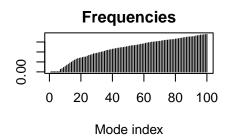

```
library(bio3d)
  pdb <- read.pdb("1hsg")</pre>
 Note: Accessing on-line PDB file
  pdb
Call: read.pdb(file = "1hsg")
